PROJECT DESCRIPTION

Title of the Project: Smart Digital Platform to Promote Eco and Cultural Tourism

Domain: Travel & Tourism Technology (Smart Tourism)

Problem Statement:

Many eco-tourism and cultural tourism destinations remain under-promoted due to the lack of a centralized digital platform that provides reliable information about local attractions, traditions, eco-friendly travel options, and community experiences. Tourists often struggle to discover authentic cultural sites, sustainable travel routes, local guides, and environmentally responsible tourism activities. At the same time, local communities and small tourism businesses face difficulties in reaching a wider audience and promoting their cultural heritage.

To address this issue, there is a need for a Smart Digital Platform that connects tourists with eco-friendly destinations, cultural experiences, and local communities. The platform should provide information about sustainable tourism locations, cultural events, heritage sites, eco-friendly accommodations, and travel guidance while promoting responsible tourism and supporting local economies.

Abstract:

The Smart Digital Platform to Promote Eco and Cultural Tourism is designed to help travelers discover sustainable destinations and authentic cultural experiences through intelligent digital support. The platform generates personalized travel plans based on user preferences such as interests, budget, travel style, and trip duration. It integrates external services like the Weather API and Google Maps API to provide real-time travel information, route guidance, and location-based recommendations.

An AI-powered chatbot assists users in exploring destinations, filtering tourism options, and answering travel-related queries while also collecting user feedback to improve recommendations. The platform focuses on promoting eco-friendly tourism practices and local cultural heritage, helping travelers make responsible travel choices.

Additionally, the system is designed to be scalable and can be extended in the future to include a digital marketplace for local handicrafts and community-based products, thereby supporting local artisans and strengthening the local economy. This platform aims to bridge the gap between tourists and sustainable cultural destinations through technology-driven tourism management.

Objectives of the project:

1. To develop a smart digital platform that promotes eco-tourism and cultural tourism by providing users with reliable information about sustainable destinations and cultural heritage sites.
2. To generate personalized travel plans based on user preferences such as interests, budget, travel style, and trip duration.
3. To integrate real-time services such as Weather API and Google Maps API to provide accurate travel information, route guidance, and location-based recommendations.
4. To implement an AI chatbot that helps users explore destinations, answer travel-related queries, filter tourism options, and collect feedback from travelers.
5. To encourage eco-friendly tourism practices by promoting environmentally responsible travel options and sustainable destinations.
6. To support local communities and cultural heritage by highlighting local traditions, cultural events, and heritage locations.
7. To create opportunities for local artisans and businesses by extending the platform in the future to include a marketplace for local handicrafts and products.
8. To improve user travel experience by providing a convenient, interactive, and intelligent tourism planning platform.

Hardware/Software Used:

Frontend: React + Vite
Backend: Node.js + Express
Database: DBMS
Data Processing: Python
UI Framework: Tailwind CSS
State Management: React Context

Mapping of SDG:

1. SDG 8: Decent Work and Economic Growth
2. SDG 11: Sustainable Cities and Communities
3. SDG 12: Responsible Consumption and Production
4. SDG 13: Climate Action
